

# ENVIRONMENTAL LEAD NEWSLETTER

January 2002

## UPDATES AND ANNOUNCEMENTS

### New Kentucky Rules

New Environmental Lead regulations identified as 902 KAR 48:010, 48:020, 48:030 and 48:040 will be in effect by March 2002. The regulations will effect the certification of individuals, accreditation and reporting of training providers, and assessment and abatement standards and procedures. The agency is in the process of simplifying the regulations into user booklet forms for distribution and these should be available in the Spring of next year. However if desired the regulations can now be reviewed on the Internet at:

<http://www.lrc.state.ky.us/kar/TITLE902.HTM> and look under: **Chapter 48 Lead Abatement**

**The following individuals or companies certifications have now expired:**

## Lead Hazard Abatement Companies Issues:

### Certification:

According to Kentucky regulation a company must have certified individuals one of which must be a certified supervisor or project designer, and shall perform abatement activities using identified standards and procedures. **Note that** the certification of the company is voided when the company loses the required certified individual(s) even if the company identified two (2) year certification period has not been concluded.

### Abatement Permits:

Bidding a lead-hazard abatement job can be costly.

According to State law persons (which includes companies) who offer to perform lead-hazard abatement, shall be certified by the Department. Since the company should be certified and knowledgeable of State requirements you should take the time to check with the Department on the cost of the permit involved before bidding the project. We may be sympathetic, but this is a part of the planning process and the cost will be yours to bear.

## Supervisor Issues:

“Look before you leap”

Ask questions when you see a project that have words, such as “lead-hazard control and lead-hazard reduction” included a part of the job specifications, etc.

When a renovation and remodeling project is indicated ask why they are requiring a certified company. It may be that they want the best. But there may be something else that you need to know.

When you became certified you indicated that you intended to conduct lead hazard abatement activities according to Kentucky procedures and standards.

As a certified person you are responsible for compliance with Kentucky rules and regulations, and non-compliance can result in the loss of certification.

## INSIDE THIS ISSUE

- 1** Updates and Announcements
- 1** Company Issues
- 1** Supervisor Issues
- 2** Risk assessor – Inspector Issues
- 2** What is a lead-based paint hazard?
- 3** Listing of Certified Individuals/companies
- 9** Listing of Accredited Training Providers

Editor:  
Terry M. Wescott, Health Program Administrator  
Environmental Lead Program  
Division of Public Health Protection and Safety  
Department for Public Health  
275 East Main Street  
Frankfort, Kentucky 40621 (502) 564-4537

## Inspector-Risk Assessor Issues

There has been some confusion in the past concerning the responsibility of the individual conducting a visual clearance after abatement. The individual must know what the project involved because:

Visual assessment means looking for, as applicable:

- (1) Deteriorated paint;
- (2) Visible surface dust, debris and residue as a part of a risk assessment or clearance examination; or
- (3) The completion or failure of a hazard reduction method.

If any of the conditions are found or the activities have not been completed the project samples should not be collected and the conditions shall be corrected before sampling can be conducted.

### Soil Sampling:

HUD definition of soil-lead hazard means: bare soil on residential property that contains lead equal to or exceeding levels promulgated by the U.S.

Environmental Protection Agency pursuant to section 403 of the Toxic Substances Control Act (TSCA) or, if such levels are not in effect, the following levels: 400 ug/g in play areas; and 2,000 ug/g in other areas with bare soil that total more than 9 square feet (0.8 square meters) per residential property.

New EPA TSCA soil-lead hazard definition is: bare soil on residential real property or the property or on the property of a child-occupied facility that contains total lead equal to or exceeding 400 parts per million (ug/g) in a play area or average 1,200 parts per million of bare soil in the rest of the yard based on soil samples.

Note that the level is lower than HUD and there is no minimum (minimum amount of bare soil in the rest of the yard). The EPA definition shall be used.

Bare soil means soil or sand not covered by grass, sod, other live ground cover, wood chips, gravel, artificial turf, or similar coating.

## When Is Lead-Based Paint a Hazard?

The following is based on similar wordage definitions in HUD, EPA, and State rules.

Lead-Based Paint means paint or other surface coatings that contain lead equal to or exceeding 1.0 milligram per square centimeter or 0.5 percent by weight or 5,000 parts per million (ppm) by weight.

Lead-Based Paint Hazard means any condition that would result in adverse human health effects if exposure from:

1. Lead from dust-lead hazards
2. Soil-lead hazard
3. Lead-based paint that is deteriorated
4. Lead-based paint in chewable surfaces
5. Lead-based paint in friction surfaces
6. Lead-based paint in impact surfaces.

Dust-lead hazards means surface dust that contains a dust-lead loading (area concentration of lead) at or exceeding the levels promulgated by the EPA pursuant to section 403 of the Toxic Substances Control Act or, if such levels are not in effect, the standard in 35.1320.

Soil-lead hazard means bare soil on residential property that contains lead equal to or exceeding levels promulgated by the U.S. Environmental Protection Agency pursuant to section 403 of the Toxic Substances Control Act.

Deteriorated paint means any interior or exterior paint or other coating that is peeling, chipping, chalking or cracking, other any or coating located on an interior or exterior surface or fixture that is otherwise separated from the substrate.

Chewable Surface means an interior or exterior surface painted with lead-based paint that a young child can mouth or chew. To be considered a hazard the surface must show evidence of chewing.

Friction surface means an interior or exterior surface that is subject to abrasion or friction, including, but not limited to, certain window, floor, and stair surfaces.

Impact surface means an interior or exterior surface that is subject to damage by repeated sudden force, such as certain parts of doorframes.

**Note that all of these hazards to be addressed when assessing properties and if required under certain conditions in the HUD rules all these lead hazards must be abated.**
